pay2
Posted by hollandtest - 2008/04/15 06:07

_____

I installed pay2downloadxt
My first problem is that I can not do an upload because my file is too big (i think) but I can solve that eventually.
The biggest problem is that I do not get a product selection.
I uploaded a small jpg file as a test, but I only get a link in the mene with on the mainscreen (after clicking) the pay now button.
If i click it i get an empty paypal screen with my paypal address.
Any idea what I do wrong?
it is on www.duett.nl click volvo cd rom.

_____

Hi,

looks like you didn't set up the menu entry correctly (did you maintain the "ID" parameter as described in the manual?
regrads,
Oli

_____

First of all, this component is a great concept with great potential for someone like me who wants to sell ebooks. The best part is that it is free, for which I sincerely thank the developer. Now I will have a few questions.
Firstly, re: "For the symbolic value of 1 € you can get the quick guide and see "Pay to Download XT" in action, just press the button below.", what does "symbolic" mean and is the "quick guide" free, or not? Hopefully, access to the quick guide will be free and information in the guide will resolve other problems I have encountered so far, such as:
A.-Re: "Pay to Download XT" displays the decription for the item & a paypal "pay now" button.". Pay Now button is displayed on my Joomla website page, but not the item description.
B.-You must manually type in the product name on the Paypal checkout page.
C.-Tried, but unable to change currency from Euros (EUR) to Canadian currency. (I tried CA and CAN in the settings but the PayPal checkout still displays Euros)
D.-I would like a detailed and easy explanation of how to get the "Token" code required in the settings and more information on "Payment Data Transfer (PDT)".
E.-Re: "By clicking, the user is redirected to paypal, makes his payment and is directed back to your site and - if the transaction was correct - may download the specified file.". When you say the user is redirected back to my site, do you mean that this happens automatically, or that the user then has to

click on the link back to my website at the bottom of the Paypal checkout page? Also, when you say that the user returns to my website to "download the specified file", does this mean that when the user returns to my site they now find a download button or link that wasn't there at the beginning of the purchase process? Thankyou in advance for answering my questions and resolving these issues.
More questions to follow.

_____

Hi Ken,

the "symbolic" value of 1€ is "symbolic" in that sense, that it doesn't cover the costs or time needed to develop, maintain and support the component (or even to create the manual).
The component, plugin, support etc... are free, the manual is not exactly free, however it's worth it ;) The time to write this post is worth more than a € I think ;)
To your questions:
A) Most likely you didn't create a menu entry or didn't maintain the ID parameter in the menu entry, then P2DXT doesn't find the item (and of course no description)
B) same as A)
C) That was actually a bug in 1.00.00 that is solved with the latest version.
D) You can get the token from your paypal profile if you activate PDT in your "website payment preferences) Detailed information on PDT is available on the paypal site. To keep it short: With PDT Paypal transfers some data back to your site, P2DXT sends back the token and the transaction ID, paypal then confirms the correctness of the transaction.
E) Another feature which has to be activated in your website payment preferences in your paypal profile. Then the user is returned automatically to your site and finds a confirmation text + a button to download the file.

Hope that helps,
regards,
Oli

_____

Sorry for my English, I am French!

First of all thank you for the update. Now, the field 'currency' is OK.

I receive this message when I want to cancel the transaction:
Fatal error: Call to a member function on a non-object in .../components/com_p2dxt/p2dxt.php on line 37

I think that it would be necessary to remove the comments on this line in the file "p2dxt.php"

...
//$params = $mainframe->getParams($menu);
...

_____

First of all - THANK YOU. Great idea, and I'm excited about the prospect of getting this up and running.
I installed, and when I go to "Edit settings" I get the fatal error:
Warning: Missing argument 2 for mosdbtable() in /home/charlott/public_html/includes/database.php on line 698

Warning: Missing argument 3 for mosdbtable() in /home/charlott/public_html/includes/database.php on line 698

Fatal error: Call to a member function on a non-object in /home/charlott/public_html/includes/database.php on line 827

Any suggestions.
I would like to buy the manual/quick guide, but want to get this up and running first.

Even if I can't get it working, you deserve kudos for the concept and the work!
Tom

_____

Hi Roland,

are you using the latest version 1.00.03 of P2D XT? Which Joomla version are you using?
regards,
Oli

_____

I had a erro when a made a payment the rederect link was with a dubbel slash it was somting like thiswww.youtdomain.com//index.php?.....

I have found the code to reduce the dubbel slach to one slash its in the helper.p2dxt.php file on line 43

change

```
 $returnurl = htmlentities($uri->root()."/index.php?option=com_p2dxt&task=confirm"Â«Â»);
  $cancelurl = htmlentities($uri->root()."/index.php?option=com_p2dxt&task=init&p2did=".$id);
```

in to

```
 $returnurl = htmlentities($uri->root()."index.php?option=com_p2dxt&task=confirm"Â«Â»);
  $cancelurl = htmlentities($uri->root()."index.php?option=com_p2dxt&task=init&p2did=".$id);
```

but stil i get a blank page when a made a payment and no download page??????

_____

Hi Oli,
I'm using Joomla! 1.0.12 Stable
I did download and install the latest version of ptd from the joomla.org site.

Many thanks,
Tom

_____

Hi Tom,
I just tried on an old local 1.0.12 installation and it works fine. You can not give me admin access to your site, can you?
thanks,
regards,
Oli

_____

Hi Tom,
finally I found it. It's an incompatibility with PHP4.
Please extract the attached file to /adminitrator/components/com_p2dxt/. Then it should work.
Sorry for the inconvenience,
regards,
Oli

_____

Hi and thank you.
Tried it.
Got the following error, when I went to "edit settings."
Warning: Missing argument 2 for mosdbtable() in /home/charlott/public_html/includes/database.php on line 698

Warning: Missing argument 3 for mosdbtable() in /home/charlott/public_html/includes/database.php on line 698

Fatal error: Call to a member function on a non-object in /home/charlott/public_html/includes/database.php on line 827

_____

Hi,
no change? That's really strange... On my local machine I could reproduce the error and solve it with the file above... Can you check, if class.p2dxt.php looks like that:

```
(..)
class p2dxt extends JTable
{
 var $id    = null;
 var $token   = null;
 var $business  = null;
 var $locale   = null;
 var $testtoken  = null;
 var $testbusiness = null;
 var $errortext  = null;
 var $thanktext  = null;

 function __construct( &$db )
 {
  parent::__construct( '#__p2dxt', 'id', $db );
 }
 function p2dxt (&$db )
 {
  $this->mosDBTable( '#__p2dxt', 'id', $db );
 }

}
(..)
```

Thanks,
regards and sorry again for all the trouble.
Oli
