Cant get StaticXT it working

Posted by jungeuskoelle - 2010/10/12 23:17

_____

Hallo, i am trying to take static website to joomla, but the module does not give an answer.

StaticXT http://www.rheinhoehenweg.de/index.php?option=com_staticxt&Itemid=53

static files http://www.rheinhoehenweg.de/statisch/index.htm

Do you have an idea on that? If it is to difficult please let me know; i will have to make this complete content new, but i am looking for a shorter way for the first... thanks kk

Hi,

try this link:
http://www.rheinhoehenweg.de/index.php?option=com_staticxt&Itemid=53&staticfile=index.htm

It doesn't look very nice (because you have some fixed width things - e.g. the google ads in the static files that crash the joomla template) however it seems to work.

Did you enter a value for the parameter "staticfile" in the menu entry?

regards,

Oli

Hallo, thank you again for your answer! Google ads: i will delete, this is old content.

What parameter and where please? Thank!

you are welcome to Berlin or Mallorca!
Best regards!
kk from www.pinotouren.de :laugh:

Hi,

ich glaube dann nehme ich Malle ;-)
Wenn du einen Menüeintrag für staticXT anlegst, solltest du eine ganze Reihe von Parametern zur Auswahl haben. Bei "static file" index.htm eingeben.

When creating a menu entry for staticxt you should have various parameters to maintain. Enter "index.htm" for the "staticfile" parameter.

Grüße,

Oli
